

**Name: Omar El-sayed Mostafa**

**A brief overview of the project idea:**

My project is a small sport and entertainment website called +90. I designed a custom logo for the website where you can follow the important matches, news, results of previous matches and events, you can also book tickets to attend any of them.

My main reference is website called **Tazkarti** and many others website like filgoal,yallakora,fotmob,Alahly.com and sofasoccer.

I used html,css and javascript(jQuery included in three pages)

## What's inside the project?

### 1.First page (first home page):

It's like a welcome page to users It has a login and registration section, and whether you want the sports or entertainment section you can choose what you want .

### 2.second page (register):

It's This page is to register on the site as a user to log in and be able to book tickets. After booking, you will be directed to the login page.

### 3.third page (login):

This page is for direct login, whether you already have an account or have just registered

from the registration page, after logging in, you will go to the home page.

#### 4. fourth page (homepage):

Here a fixed navbar appears at the end of the site so you can go to any section you want in no order

A page containing a slider of today's matches and an arrangement of the table of the most important leagues that are of interest to users  
Summary of the most important news.

#### 5. fifth page (matches):

On this page there are the most important matches of the week, their times and locations, the match referee, the most important results of previous matches, and a button to show more results.

## 6. Sixth page (events):

On this page there are the most important concerts available on the site and even those that will be available soon. Each concert has a button to go to its ticket reservation page. There is an ad for Pepsi at the bottom left of the page.

## 7. seventh page (match tickets):

On this page, there are 8 matches available for reservation, and a cart that shows the tickets that have been reserved, their price, and the total payments in addition to 14% tax, and the Push button shows a message containing a code to pay via Fawry.

## 8. eighth page (events book):

On this page there are concerts available for reservation and an announcement about what will be available soon, in addition to a cart showing the tickets that have been reserved.

Note: The previous two pages have different designs and their JavaScript code is intentionally different to test myself on how to make the same idea work in more than one way.

9.ninth page(locations):

It has places and locations of the most important stadiums and theaters where all the important events take place. Clicking on the map image shows you the location of the place on Google Map.

10. Tenth page (your tickets):

This page is divided into two sections:

1. Previously reserved tickets for entertainment shows.
2. Tickets that were reserved for previous matches.

After they appear, you can hide either of them by clicking on the tickets themselves.

11. Eleventh page(contact us): On this page, there are ways to communicate with those responsible for the site, whether by phone, email, Facebook, or Twitter. There is an option to write a message that will arrive directly, and after writing it, a message will appear to confirm that it has arrived successfully.

Note: I tried to use everything we learned during the course in this project to get the most benefit out of it, but due to some special circumstances I needed to finish this project as quickly as possible, but I certainly came out with a lot of benefit from it, but I know that I can do better than what I did.

Thank you for everything that was presented during the course.
